

ENVIRONMENTAL POLICY

The Pietro Galliani S.p.A. organisation

- *is fully aware that a responsible economic strategy, addressed to the environmental issues resulting from its activities, is essential for its success and that of its customers;*
- *moreover it recognizes that the continuous improvement of its environmental performances leads to significant commercial and economic advantages, satisfying, at the same time, the expectations of environmental improvement related to the territorial context in which the Company operates;*
- *therefore undertakes to pursue a policy of continuous improvement of its environmental performance, minimising, where technically possible and economically sustainable, any negative impact of its activities on the environment;*
- *is committed to maintaining compliance with current environmental laws and regulations.*

For that purpose, after conducting a detailed Initial Environmental Analysis of the production activities carried out at the site, Pietro Galliani S.p.A. has identified priority areas of intervention and has set itself the following goals:

implementing an Environmental Management System meeting all the requirements contained in UNI EN ISO 14001:2015;

communicating to the public (suppliers and customers) the information needed to understand the effects of the company's activities on the environment, pursuing an open dialogue;

promoting employees' responsibility towards environmental protection and implement staff information and training programmes;

ensuring cooperation with public authorities;

knowing the environmental management of its suppliers;

assessing the introduction of products into the business that have better environmental compatibility than those currently in use;

assessing in advance the environmental impacts of its facilities;

preventing and mitigate the impacts of its activities on soil and groundwater;

controlling and reduce impacts on surface water;

controlling and reduce the production of pollutant emissions into the atmosphere;

improving the management of waste produced, with particular attention to hazardous waste;

taking the necessary measures to reduce the environmental impacts of emergency situations;

controlling the consumption of water resources;

checking the quantity and type of raw and auxiliary materials and finished products for the correct definition of environmental indicators.
